DETAILED ACTION

1. This Office Action is in response to Applicant's communication received on 5/01/08.

Information Disclosure Statement

2. The IDSs received on 11/25/08 has been received. However, many of the entries fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each cited foreign patent document; each non-patent literature publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered. The non-patent literature publication not provided but cited in the IDSs has not been considered as indicated by these entries being crossed out. Also, note that some of these publications have no date associated with the entries.

Examiner's Statement of Reasons for Allowance

3. In light of Terminal Disclaimers the double patenting rejections is withdrawn.
4. The submitted non-patent literature publication and patent/patent publications submitted by applicant in IDSs received on 11/25/08 have been considered.
5. Boebert et al. (5,502,766) teach a method of validating the identity of a sender of an electronic message (see abstract) comprising the steps of: associating sender validation information with sender identity information in a computer system (see abstract and fig 7); receiving into a terminal, the electronic message, encoding information derived from the electronic message and sender identity information

Art Unit: 2134

(see fig 8); sending the electronic message, the encoding information and the sender identity information to the computer system (see fig 8 as item 90 is sent to item 24); in the computer system, retrieving the validating information associated with the received sender identity information and validating the identity of the sender using the retrieved validating information and the electronic message (see fig 16) but do not disclose the specific steps of retrieving public key of the entity based on identity information of the entity, creating the function of the retrieved public key and the digital signature of the entity and compare the result with the function of the original message that contained the identity information of the entity and if the comparison matched the authentication of the entity is verified as recited in the independent claims of 1-37.

Therefore the prior art, taken singly or in combination does not teach or suggest the relationship between these features. As a result the claimed invention is considered to be in condition for allowance as being novel and non-obvious over prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on statement of Reasons for Allowance".
